Curriculum Vitae

Education

Dec 2016 – Today **Ph.D. Program in Information Technologies for Engineering**, *Group for Research on Automatic Control Engineering (GRACE)*, University of Sannio, Benevento, Italy.
- Research topics are in robotics, control, path planning and software-in-the-loop.
- Supervisor: Prof. Dr. Luigi Iannelli.

Mar 2019 – Nov 2019 **Visiting Ph.D. student at Laboratoire d'Analyse et d'Architecture des Systèmes (LAAS), Robotics and Interactions (RIS) group**, *Centre National de la Recherche Scientifique (CNRS)*, Toulouse, France.
- Control of full-actuated 6DoFs[1] robots with onboard sensors.
- Supervisor: Prof. Dr. Antonio Franchi.

Mar 2016 **Master of Science in Electronic Engineering**, *University of Sannio*, Benevento, Italy.
- Focus on robotics, control, electronics and telecommunication.

Jul 2012 **Bachelor of Science in Computer Engineering**, *University of Sannio*, Benevento, Italy.
- Focus on robotics, control, software, telecommunication and electronics.

Feb 2012 – Jun 2012 **Industrial Internship in Systems Engineering**, *Mosaico Monitoraggio Integrato S.r.l.*, Benevento, Italy.
- Design a software production methodology using an Object Oriented (OO) approach for Programmable Logic Controllers (PLCs).

Professional Affiliation

Dec 2016 – Today **IEEE (Institute of Electrical and Electronic Engineers)**, *Student Member*.

Dec 2016 – Today **IEEE Control Systems Society**, *Student Member*.

Dec 2016 – Today **IEEE Robotics and Automation Society**, *Student Member*.

Academic Appointments

Jun 2020 – Today **Postdoctoral Research Fellow**, *Multi-robot Systems Group (MRS)*, Czech Technical University in Prague, Prague, Czech Republic.
- Supervisor: Prof. Dr. Martin Saska.

[1] DoFs: Degree of Freedoms.

Dec 2019 – Jun 2020 **Research Fellow**, *Group for Research on Automatic Control Engineering (GRACE)*, University of Sannio, Benevento, Italy.
- Supervisor: Prof. Dr. Luigi Iannelli.

May 2016 – Nov 2016 **Research Fellow**, *Group for Research on Automatic Control Engineering (GRACE)*, University of Sannio, Benevento, Italy.
- Supervisor: Prof. Dr. Luigi Iannelli.

Professional Experience

Jun 2014 – Apr 2020 **Technical Writer**, *Writer of technical articles for magazines and web platforms*, i.e., "`Win Magazine`", "`Ridble`", "`Firmware`", "`EOS Book`" and "`Fare Elettronica`", Italy.

Apr 2016 **Junior Software Engineer**, *Software Engine S.r.l.*, Solofra, Avellino, Italy.
- Web Developer (specialized in front-end development) responsible for the care (maintenance, debugging) and implementation of HTML5 and CSS3 templates (following the mobile-first responsive and cross browsing), javascript (jQuery, Angular-js) and back-end integration (Java), as well as, management and implementation of relational databases and debugging.
- Projects completed:
  - *Software developer for a management system*. Develop of a software for managing documents presented under the law 219/81 and ss.mm.ii. for the town of Mirabella Eclano.

Aug 2012 – Jan 2013 **System Integrator**, *Mosaico Monitoraggio Integrato S.r.l.*, Benevento, Italy.
- Design and implementation of control systems for industrial automation based on PLC (Programmable Logic Controller) and SCADA (Supervisory Control And Data Acquisition).
- Projects completed:
  - *Storage and loading system of soda autoclaves in autoclaving*. Design and development of the system, and analysis of the control system requirements in accordance to the safety functions.
  - *Leaching process of the blades core for high performance turbines*. Design and development of the system, and analysis of the control system requirements in accordance to the safety functions.

Miscellaneous

Research Areas Unmanned aerial vehicles control; software and simulation-in-the-loop; temporal logic; autonomous system.

Skills and expertise Programming language: C, C++, Java. Jekyll. CMake. MATLAB/Simulink. Robotics Middleware and 3D dynamic simulation environments: ROS (Robot Operating System), GenoM (Generator of Modules), Gazebo, MATLAB Virtual Reality Toolbox. Markup languages: Markdown, reStructuredText (RST), LaTeX. Distributed version control systems: Mercurial and Git. Continuous integration systems: Jenkins, GitHub Actions, TravisCI.

License **Aircraft Pilot's License**, Remote Piloting Media Vehicles Regulation, VL/Mc class, Aeroclub of Benevento Gen. Nicola Collarile, Benevento, Italy, April 2017.

Open-source Dev. Contributor, author and maintainer of open-source projects:

- Among the authors and maintainer of the TEX repository "europecv". CTAN (Comprehensive TEX Archive Network) profile available at https://ctan.org/home/g.silano.
- Contributor of the styles, RotorS, bebop_autonomy, ros-travis-integration, kaobook packages, templates and draw examples in LATEX.
- GitHub and Gist profiles: https://github.com/gsilano and https://gist.github.com/gsilano, respectively.

Invited Talks

Apr 2016 **Advanced drone applications: opportunities and problems**, *Make & Share event*, Tech Coffee association, Benevento, Italy.

Teaching Experience

Teaching Assistance

Sep 2017 – Dec 2019 **Teaching Assistant for Discrete Systems**, *University of Sannio*, Benevento, Italy, Supervisor: Prof. Dr. Luigi Iannelli.

Mar 2016 – Jun 2019 **Teaching Assistant for Automatic Control**, *University of Sannio*, Benevento, Italy, Supervisor: Prof. Dr. Luigi Iannelli.

Sep 2018 – Dec 2018 **Teaching Assistant for Advanced Controls**, *University of Sannio*, Benevento, Italy, Supervisor: Prof. Dr. Luigi Glielmo.

Co-supervisor Scientific Activity

2020 **MIT Independent Activity Program of Ria Sonecha**, *Software- and hardware-in-the-loop methodologies aimed to test and validate the open-source simulation platform CrazyS*, University of Sannio, Benevento, Italy, Advisor: Prof. Dr. Luigi Iannelli.

2018 **MIT Independent Activity Program of Benjamin Rodriguez**, *Crazyflie 2.0 model and control for Gazebo 3D simulator*, University of Sannio, Benevento, Italy, Advisors: Prof. Dr. Luigi Glielmo, Prof. Dr. Luigi Iannelli and Dr. Davide Liuzza.

Student Supervisor

2017 **Bachelor Thesis of Emanuele Aucone**, *Hovering control for a nano quad-rotor*, University of Sannio, Benevento, Italy, Advisor: Prof. Dr. Luigi Iannelli.

2017 **Bachelor Thesis of Francesco Mariano D'Andrea**, *Adaptive control of the vertical dynamics of a drone*, University of Sannio, Benevento, Italy, Advisor: Prof. Dr. Luigi Iannelli.

2017 **Bachelor Thesis of Olga Napolitano**, *State estimation for a quad-rotor*, University of Sannio, Benevento, Italy, Advisor: Prof. Dr. Luigi Iannelli.

2017 **Bachelor Thesis of Susanna Maio**, *Analysis of the vertical control of a quad-rotor in the V-REP simulation environment*, University of Sannio, Benevento, Italy, Advisor: Prof. Dr. Luigi Iannelli.

2016 **Bachelor Thesis of Andrea Mascia**, *Study of the algorithm for the position estimation of a micro UAV*, University of Sannio, Benevento, Italy, Advisor: Prof. Dr. Luigi Iannelli.

2016 **Bachelor Thesis of Luca De Vincentis**, *Experimental characterization of the flight control system of a micro UAV*, University of Sannio, Benevento, Italy, Advisor: Prof. Dr. Luigi Iannelli.

Scientific Activity[2]

Edited books reviewer

2020 Koubaa, Anis (Ed.), "Robot Operating System (ROS) - The Complete Reference (Volume 6)", Springer International Publishing, 2021.

2019 Koubaa, Anis (Ed.), "Robot Operating System (ROS) - The Complete Reference (Volume 5)", Springer International Publishing, 2020.

2018 Koubaa, Anis (Ed.), "Robot Operating System (ROS) - The Complete Reference (Volume 4)", Springer International Publishing, 2019.

International Journal Reviewer

2019 – 2020 IEEE Transactions on Control Systems Technology

2019 – 2020 Springer Journal of Intelligent & Robotic Systems

International Conference Reviewer

2020 International Conference on Unmanned Aircraft Systems (ICUAS)

2020 IEEE International Workshop on Metrology for Aerospace (MAS)

2019 – 2020 IEEE Conference on Decision and Control (CDC)

2019 IEEE European Control Conference (ECC)

2018 – 2019 IEEE American Control Conference (ACC)

2018 IEEE Conference on Control Technology and Applications (CCTA)

Research Projects

[RP1] **Participation within H2020-2019-2-RIA-two stages - ICT**, *AERIAL COgnitive integrated multi-task Robotic system with Extended operation range and safety*, research project agreement 871479, Project Advisor for the Czech Technical University in Prague: Prof. Dr. Martin Saska, Role: participant, December 2019 – November 2023.

[RP2] **Participation within H2020-2018-2-RIA-two-stages – ECSEL**, *Comp4Drones, Software Components For Drones*, research project agreement 826610, Project Advisor for the University of Sannio: Prof. Dr. Luigi Iannelli, Role: participant, October 2019 – September 2022.

[RP3] **Participation within the Mohamed Bin Zayed International Robotic Challenge (MBZIRC) 2020**, Project Advisor: Prof. Dr. Antonio Franchi, Role: member of the Laboratoire d'Analyse et d'Architecture des Systemes (LAAS) team, September 2018 – February 2020.

[2] Link to the Publons profile: https://publons.com/researcher/1667164/giuseppe-silano.

[RP4] **Participation within H2020-2017-2-RIA-two-stages – ECSEL**, *AFarCloud, Aggregate Farming in the Cloud*, research project agreement 783221, Project Advisor for the University of Sannio: Prof. Dr. Luigi Glielmo, Role: participant, September 2018 – August 2021.

Research Activities

Path planning algorithms for autonomously managing the inspection of civilian infrastructure with multi-robot systems when considering rather complex mission specifications

Within the Aerial-Core European project [RP1][3], path planning algorithms aimed to compute feasible and constrained trajectories for a fleet of Unmanned Aerial Vehicles (UAVs) leveraging on Signal Temporal Logic (STL) specifications have been investigated. The planner allows to formulate rather complex missions avoiding obstacles and forbidden areas along the path when also considering vehicle constraints (e.g., maximum velocity and acceleration) [W1].

Control algorithms for autonomously managing the production and coordinating the farming operations

Within the AFarCloud European project [RP4], control techniques aimed to autonomously managing the production and coordinating the farming operations have been investigated, i.e., hierarchical planning algorithms (e.g., RRT, A*, etc.). Specifically, algorithms to coordinate the operations within the farming autonomous activity, thus enhancing productivity and cost reduction, gradually shifting towards a high-level autonomy [C3].

Flight control of Unmanned Aerial Vehicles

Recently some activities dealing with UAVs, in particular multi-rotor drones, [J1], [BC1], [C2], [C4] and [C5] have been carried out. Software-in-the-loop (SIL) simulation has been investigated as an effective tool for analyzing the behavior of the closed control loop [BC1] and for helping in the design of control strategies [C2].

- **CrazyS**: CrazyS is an extension of the ROS (Robot Operating System) package RotorS, aimed to model, develop and integrate the Crazyflie 2.0 nano quad-rotor in the physics based simulation environment Gazebo. Such simulation platform allows to understand quickly the behavior of the flight control system by comparing and evaluating different indoor and outdoor scenarios, with a details level quite close to reality. The proposed extension, running on Kinetic Kame and Melodic Morenia versions of ROS but fully compatible with the Indigo Igloo one, expands the RotorS capabilities by considering the Crazyflie 2.0 physical model, its flight control system and the Crazyflie's onboard IMU (Inertial Measurement Unit), as well. The code has been released as open-source under Apache license (`https://github.com/gsilano/CrazyS`) and at the same time a pull request was opened on the RotorS repository with the aim to share the

[3] The research activity was partially carried out also within the Comp4Drones European Project [RP2].

obtained results with other researchers who already use such tools and would like to use the platform [BC1], [C4].

- **BebopS**: The repository contains the ROS code developed for the "Aerial robotics control and perception challenge", the Industrial Challenge of the 26th Mediterranean Conference on Control and Automation (MED'18) [A3]. The code aims to simulate the dynamics of the Parrot Bebop 2 together with the flight controller (both high and low level) when external disturbances (e.g., wind gusts) acting on it. The control algorithms were designed in MATLAB/Simulink and validated in Gazebo by using the MathWorks Robotics System Toolbox (RST). Therefore, the repository contains both ROS nodes and launch files needed to simulate the drone behavior when a tracking algorithm is run. Also, on GitHub the glue code written during the challenge to tackle the tracking problem with the real platform is available. Such code allows to send control commands and to receive data from the aircraft and the Motion Capture (MoCap) systems, i.e., Vicon. Finally, the repository contains the developed ROS code to connect the control algorithm to the Parrot Sphinx simulator including the Parrot Bebop onboard firmware in the loop. In this way, details like synchronization, timing issues, fixed point computation, overflow, divisions-by-zero, can be isolated and investigated in detail [C2]. The code has been released as open-source under Apache license at the link `https://github.com/gsilano/BebopS`.

- **MAT-Fly**: MAT-Fly is a numerical simulation platform for multi-rotors aircraft characterized by the ease of use and control development. The platform is based on MATLAB and the MathWorks Virtual Reality (VR) Toolbox that work together to simulate the behavior of a drone in a 3D environment while tracking a car that moves along a nontrivial path. The VR toolbox has been chosen due to the familiarity that students have with MATLAB and because it allows to move the attention to the classifier, the tracker, the reference generator and the trajectory tracking control thanks to its simple structure. The overall architecture is quite modular so that each block can be easily replaced with others by simplifying the development phase and by allowing to add even more functionalities. The code is released under Apache license and made available at the link `https://github.com/gsilano/MAT-Fly`, thus making the numerical platform available for scientific and educational activities [J1], [C5].

Mohamed Bin Zayed International Robotics Challenge (MBZIRC) 2020

The Mohamed Bin Zayed International Robotics Challenge (MBZIRC) is a biennial international robotics competition that provides an ambitious and technologically demanding set of challenges and is open to all teams from all countries. Also, the MBZIRC competition aims to inspire future robotics through innovative solutions and technological excellence. Within the competition, specifically the "challenge 2" of the 2020 edition, autonomous aerial and ground robots have been carried out for navigation and manipulation tasks, in unstructured, outdoor and indoor environments. In particular, a

team of UAVs and a UGV (Unmanned Ground Vehicle) collaborating to autonomously locate, pick, transport and assemble different types of brick shaped objects to build pre-defined structures, in an outdoor environment. The challenge is motivated by construction automation and autonomous robot based 3D printing of large structures. This research activities has been carried out during the visiting period spent at LAAS-CNRS in Toulouse [A2], [C1].

Awards

[A1] **Among the participants of the UNISANNIO team, winner of the "MathWorks Minidrone Competition at IFAC2020"**, *International Robotics Competition*, organized by the MathWorks, Berlin, Germany, Webpage: https://bit.ly/2VLZZU0, http://tiny.cc/46p3pz.

[A2] **Among the participants of LAAS team [RP3], finalist of the "Mohamed Bin Zayed International Robotics Challenge (MBZIRC)"**, *International Robotics Competition*, organized by the Khalifa University, Abu Dhabi, United Arab Emirates, Webpage: http://mbzirc2020team.laas.fr/, http://mbzirc.com/, Video: https://youtu.be/0uWvDba7Eug.

[A3] **Finalist of the "Aerial robotics control and perception challenge"**, *26th Mediterranean Conference on Control and Automation (MED'18) Industrial Challenge*, organized by the University of Zagreb, Croatia, ISSN: 1066–033X, DOI: 10.1109/MCS.2018.2888719, URL: http://dx.doi.org/10.1109/MCS.2018.2888719.

Conference Contributions

Sep 2020 **Automatica.it 2020**, *national meeting held by SIDRA*[4]*, A framework for power line inspection tasks with multi-robot systems from signal temporal logic specifications*, Cagliari, Italy, Oral Presentation.

Jun 2018 **26th Mediterranean Conference on Control and Automation (MED'18)**, *CrazyS: a software-in-the-loop platform for the Crazyflie 2.0 nano-quadcopter*, Zadar, Croatia, Oral Presentation.

Sep 2017 **Automatica.it 2017**, *national meeting held by SIDRA*[4]*, An educational simulation platform for Unmanned Aerial Vehicles aimed to detect and track moving objects*, Milan, Italy, Interactive Session.

Theses

Dec 2016 – Jul 2020 **Ph.D. Thesis**, *Software-in-the-loop methodologies for the analysis and control design of small UAV systems*, University of Sannio, Benevento, Italy.

- Show the role and the effectiveness of robotic simulators and Software-in-the-loop methodologies in the flight control system design for multi-rotor aircraft.
- Advisors: Prof. Dr. Luigi Iannelli.

Sep 2015 – Mar 2016 **Master Thesis**, *Development of a simulator aimed to detect and track moving objects for UAVs*, University of Sannio, Benevento, Italy.

- Design and develop of a 3D simulator aimed to detect and track arbitrary moving objects for UAVs.
- Advisors: Prof. Dr. Luigi Iannelli.

Feb 2012 – Jun 2012 **Bachelor Thesis**, *An Object Oriented approach aimed to the creation of control software for industrial processes*, Mosaico Monitoraggio Integrato S.r.l, Benevento, Italy.

- Design a software production methodology using an Object Oriented (OO) approach for Programmable Logic Controllers (PLCs).
- Advisors: Prof. Dr. Luigi Iannelli and Eng. Paolo Rubino.
